About the Role

Are you the kind of person who opens DevTools just to see how a website works? Does tweaking code until it's pixel-perfect give you a little thrill? Then you might just be who we're looking for!

We're on the hunt for a **Web Development Intern** who speaks **HTML, CSS, and JavaScript** like it's their second language — or is at least fluent enough to build cool things and break (then fix) them again.

Key Responsibilities

- Turn designs into reality using **HTML, CSS & JavaScript**
- Build responsive, fast-loading, and user-friendly web pages
- Collaborate with designers, content creators, and fellow devs to bring ideas to life
- Learn the art of clean code, debugging, and browser testing
- Contribute to real projects with real impact (yes, your code will go live!)

Qualifications

- A basic to strong understanding of **HTML5, CSS3, and JavaScript**
- Someone who's played around with websites, maybe built a few side projects
- Curious mind, fast learner, and not afraid to ask questions
- Bonus: Experience with GitHub or live portfolio? We're impressed already.

What We Offer

- Hands-on experience with real client projects.
- Mentorship from experienced developers who've been in your shoes.
- A chance to grow fast in a fast-paced, creative startup.
- And yes, you'll leave with more than just "intern" on your resume.

Think you've got the code chops? Send your resume (and portfolio if you have one!) to **hr@unbundl.com**
